

# My CV

## Software Development

Software development has been not only my profession but also my enduring passion for the past 9 years. Below, I've provided a glimpse into my key technical skill sets and the technologies that have become integral to my work.

Want to find out more about my experience? Feel free to browse my [project portfolio](#), or [download this CV](#) in PDF format.

### Java

I have 7+ years of hands-on experience with Java, during which I've delivered a range of projects spanning academia, work, and personal initiatives. Among these are a Library Manager and a Restaurant Order Management app. I'm particularly familiar with the Spring Boot framework, which I mainly utilise for my backend development. Check out more of my projects [here](#).

### React, Angular, Vue

I've had the opportunity to work with the three major front-end frameworks in my career, and picking a favorite isn't easy. To stay versatile, I've made sure to master the fundamentals of all three. This way, I'm always well-prepared for the task at hand and I can confidently work with any of them as needed.

### APIs

I possess extensive experience developing

## Work Experience

### **Appetize.io ~ Turin (remote)**

Full-Stack Engineer

Jan 2024 — present

The team at Appetize.io has developed a SaaS to stream iOS and Android apps in the browser, also providing tools for automated testing, shareable live app previews and customer support.

TypeScript

React

NextJS

MongoDB

Docker

Github Actions

### **Resourcify ~ Turin (remote)**

Full-Stack Engineer

Mar 2022 — Jan 2024

Full-stack work involving development of greenfield tools and maintenance of legacy components, covering a diverse range of projects and technologies, adapting to new challenges and delivering quality results.

- Started in the Recycler API/Platform Core team, where I honed my skills in building robust and scalable applications.
- Joined the Accounting Squad, taking a leading role in developing an accounting platform for internal and client use. I approached this project with a focus on user experience, performance, and maintainability, resulting in a successful product launch. In close collaboration with the Accounting Ops, I sought feedback to continuously improve the functionality of the platform, ensuring it met their specific needs.
- Scaled the application to serve a growing number of clients and their orders and invoices, and I ensured that the app could handle larger volumes of data with minimal latency, resulting in faster processing and improved overall system performance.

Java

SpringBoot

TypeScript

Angular

MySQL

AWS

Docker

Kubernetes
